Hi guys,

For your reference – attached are IN's PPT presentation on things they're working through in deciding what to finalize for their Se criteria as well as a list comparing what other states are doing criteria-wise. The PPT doesn't actually list out what IN is planning on finalizing, but if you recall their last public notice included the same numbers as EPA's 304(a) w/some revisions to footnotes. They're also considering whether or not there should be separate criteria for sturgeon-present and sturgeon-less waters, and ensuring some kind of buffer for sturgeon-present waters before transitioning to waters subject to a sturgeon-less criterion. Karen and I can update you based on what we hear tomorrow w/Katie and IN on the line.

FYI...

Indiana is currently considering proposing a sturgeon present/absent model for their Se criteria. We just learned about this change last week, and I was not in the office when Eileen gave a presentation on it. Karen, would you be interested

in touching base with Eileen along with me? Another moving part here is the implementation guidance that the state is currently developing. I am hoping that they will give us a preview of that prior to putting it on public notice.

Katie

Hi Katie,

Received your phone call-sorry for the delay in responding—have been out of the office much of this week.

Sorry you missed the presentation, but hope that you were having fun in Palm Springs—at least, seeing the sun and the beach!

I'm about to run to a meeting, but will be back in the office around 2:30 your time. Would you like to set up a time to call and discuss later today or tomorrow? I can let you know where we are...it has been quite the journey. I do think it would be helpful to speak with Karen, before we share our draft implementation guidance.
